Executive Summary

INSIGHTS

This dashboard reveals a clear upward trend in earnings efficiency, measured by average hours worked and \$/mile, from late 2025 through mid-2026. The data shows that strategic order selection and refined operational criteria significantly improved profitability. Adherence to

KEY FINDINGS

- Friday through Sunday shifts account for 71% of total earnings
- Out of the busy days, Henderson (\$2,229) and Green Valley (\$1,166) make up 61% of the earnings
- The shifts associated with the total highest earnings are Dinner (\$2,436) and Weekend Dinners (\$2,235)
- Total Gross Earnings is \$7,770
- Average hours worked per shift is 3.5
- Average \$/mile is \$4

BUSINESS RECOMMENDATIONS

- Prioritize dashing Friday - Sunday as they continue to earn the most | Further investigate which hours prove more efficient
- Do not chase Peak Pay. Simply take advantage, when it conveniently lines up with dashing on Friday - Sunday.
- Stick to dashing within Henderson and Green Valley. If there is Peak Pay within other zones try it out, but leave as soon as demand weakens.
- Do not force shifts. If after 45 min there are 0 orders that meet the criteria for order selection, end shift early and try again another day.

BUSINESS IMPACT

This analysis revealed that from Q4 of 2025 to Q2 of 2026, gross earnings have increased by 96% (\$1,573 to \$3,080). Also, as my Hrs./shift decreased, avg. \$/mile increased with increased earnings overall. By being better at selecting orders via vendor performance, \$2+ /mile, and an order ETA <=25 min, and sticking to zones that yield me the highest yield orders, I was able to earn more money with less time dashing.
